## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-9, drawn to ionization detection with specific elements, classified in class 250, subclass 374.
  - II. Claims 10-18, drawn to testing a radiation energy detector, the testing is distinct from ionization detection with integrated circuitry, classified in class 250, subclass 370.09.
  - III. Claims 19-27, drawn to testing apparatus for configuration of a photon and electron detector, the testing is distinct from ionization detection with integrated circuitry and testing radiation energy detectors, classified in class 250, subclass 374.
  - IV. Claims 28-36, drawn to wireless beam checking system with specific elements, the system is distinct from ionization detection with integrated circuitry, testing radiation energy detectors and testing for configuration of photon and electron detector, classified in class 250, subclass 370.04.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the inventions bear different apparatus and system design, modes of operations and effect. Invention I discloses an ionization detector formed with integrated circuitry.

Invention II is distinct disclosing a testing instrument for radiation energy detectors.

Invention III is distinct disclosing testing configuration of a photon and electron detector.

Invention IV is distinct disclosing a wire-free beam checker system.

3. Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

5. The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

6. Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
